

CLAIMS

1. A method of generating a network name for a base station in a wireless network, comprising:

5        selecting an individual network name for the base station,  
      assigning said individual network name as the default network  
name of the base station, and  
      providing the base station with a marking from which said network  
name can be read.

10       2. A method as claimed in claim 1, comprising:  
      generating the network name for the base station based on an indi-  
vidual serial number of the base station.

15       3. A method as claimed in claim 1 or 2, comprising:  
      printing the network name on the base station or on a sticker or the  
like to be fastened to the base station.

20       4. A method as claimed in any one of claims 1 to 2, comprising:  
      reading the network name from the base station, and  
inputting said network name in a terminal to be coupled to the net-  
work.

25       5. A base station in a wireless network, the base station comprising:  
      means for communicating with a terminal on a radio channel, the  
terminal and the base station having a common network name, which is se-  
lected and assigned to the base station, and  
      a marking from which said network name can be read.
